

# Tableau Training & Support

Mastering the art of building informative reports & dashboards and getting to grips with visual analytics to gain deeper insight in your business.

- Address your skill gaps
- Get the most out of the Tableau framework in your organization
- Learn Tableau for truly compelling and informative dashboards
- Learn to hunt for insights through visual analytics
- Optimize your license portfolio
- Performance tuning
- Learn how to manage effective BI through Tableau

With the right combination of “dishes” from **Quantum’s Tableau Training & Support Menu**, you can make the most out of your Tableau investment and add value to your organization.

As an official Tableau partner with over 10 years of experience, we know the ins and outs of Tableau and know what works. Whether your interest is building beautiful reports and dashboards, creating visual analytics for discovery, or getting more out of your tableau team and helping your management team gain insights... we can help you reach your goals and avoid common pitfalls.

Starting with an audit workshop, we work with you to find which combination of menu items best fit your needs, and then – step-by-step – go about achieving the desired results.

## Components

- 1 **Training and courses** to learn data visualization and Tableau
- 2 **Coaching** - your “personal trainer” service to make basic learning stick
- 3 **Tableau Guru session(s)** - a day of onsite support and guidance in troubleshooting
- 4 **Do.Data® workshop** - learn the role-playing needed to develop useful data-driven stories
- 5 **Challenging existing reports, dashboards** for more intuitive and clearer storytelling
- 6 **Optimising the user experience** - fast, interactive and easy to understand dashboards
- 7 **Data sourcing support** - find and connect to data inside and outside the organization
- 8 **Data preparation** - ensure clean and well-structured data for accurate and effective analysis
- 9 **Maintenance & Tuning** - keep your Tableau infrastructure up-to-date and running smoothly
- 10 **Architecture specifications**- setup cost-effective & robust enterprise-grade environment
- 11 **Licensing optimization** - procurement and allocation for minimum cost and maximum value
- 12 **Prototyping & Design** develop enlightening stories

## Typical Combinations
